

Customer Demo Policy

Owner: Solutions Engineering Leadership • **Last reviewed:** September 2026 • **Applies to:** All customer-facing demos, walkthroughs, and technical follow-ups

This policy governs what Solutions Engineers, Account Executives, and any automated tooling acting on their behalf may present to prospects as current product capability. It exists to keep every customer-facing claim traceable to the current **Product Capability Matrix** — never to a prospect's request, an assumption, or a roadmap intention.

1. **GA capabilities may be demonstrated as available.** No caveats required.
2. **Beta capabilities may be demonstrated only if clearly labeled as beta and explicitly approved by a human.** Never present beta functionality as generally available.
3. **Roadmap capabilities must not be presented as currently available.** It is acceptable to acknowledge a roadmap item exists; it is not acceptable to imply it can be used today.
4. **Unsupported capabilities must not be demonstrated.** If a prospect asks about something we do not support and have no plans for, say so plainly.
5. **If capability status cannot be verified, stop and request human confirmation.** An unverifiable claim is treated the same as an unsupported one until a human resolves it.
6. **Customer-facing claims must be grounded in the current Product Capability Matrix.** The matrix is the single source of truth for what may be claimed; verbal or historical understanding of the product does not override it.
7. **Prospect requests do not constitute product evidence.** A prospect asking for a capability, or assuming we already have it, has no bearing on whether we actually do.
